

*Hill's Raingreen  
Tropicals*

- BROMELIAD NURSERY

ROUTE 1, BOX 154, LITHIA, FLORIDA 33547 - PHONE (813) 685-2392

**HILL'S  
RAINGREEN  
TROPICALS**

This is a partial listing of plants available for retail sale. This price list supercedes and cancels all previous offerings. It is impossible to keep prices and availability current; therefore, both are subject to change. Prices quoted are for established plants approximately  $\frac{1}{2}$  grown. Often, pups (offsets) are available at a lower price. It is advisable to inquire prior to ordering. Substitutions are not made.

Plants are listed in this catalogue as species, varieties, hybrids, and cultivars as such:

Species - *Vriesea ensiformis*

Varieties - *Vriesea ensiformis* var. *bicolor*

Hybrids - *Guzmania* X *Symfonie*

Cultivars - *Neoregelia carolinae* 'Rubra Erecta'

Our nursery is certified under Chapter 581, Florida Statutes for plant pests. We are also certified for burrowing nematodes as required for the states of California, Louisiana, Texas, and Arizona, grower No. 635. Our plants are certified by U.S. Department of Agriculture - Aphis No. 1617.

**SHIPPING**

We recommend shipping by Air Mail - Priority. Prices quoted in this list do not include packaging or shipping. Packaging and handling is \$3.00 per box. Exact shipping cost will be listed on the box and is due upon receiving the shipment.

Plants are dried and individually wrapped with loose soil removed. This procedure minimizes damage or loss and reduces shipping cost. It is our intention to do everything possible to insure safe arrival of each plant. Damage incurred in transit by carrier is beyond our control; thus, plants are shipped at the buyer's risk.

All checks are subject to bank clearance prior to shipping the plants. Florida customers please add 5% sales tax.

If dissatisfied with any portion of the order, return the plant(s) at your expense and a refund will be sent.

Note: In the text of the price list, plants with an asterick (\*) before them have been subjected to freezing temperatures (28°F and lower) for extended periods of time and have shown only minimal damage. Though both plant and meteorological conditions can vary, we recommend these for landscaping in Central Florida and similar climates.

Plants with a plus (+) before them have proven to be exceptional for interior use and are recommended as long lasting house plants. It is advisable when growing bromeliads indoors to provide as much light as possible and water sparingly. Water that is low in dissolved salts (rain or distilled), is strongly recommended.
